Education

University of California, San Diego — La Jolla, CA
B.S. in Computer Science & Minor in Mathematics — GPA: 3.81 — *Sept. 2023 – June 2027*

Relevant Coursework: Machine Learning, AI (Probabilistic Models), Software Engineering, Operating Systems, Advanced Data Structures, Web Development & Analytics, Computer Security

Technical Skills

Languages: Python, Java, C/C++, JavaScript, TypeScript, HTML/CSS, Bash
Frameworks & Tools: React, Node.js, Express, Next.js, PyTorch, pandas, MongoDB, Supabase, Chart.js
Developer Tools: Git, GitHub, Postman, VS Code, Vim, Linux/Unix, GDB

Experience

Web Developer Intern — June 2026 – Sept 2026
Data Science Alliance — *San Diego, CA*
- Built a Hangman (React, Vite, Supabase) and Wordle-style game for the DSA website, boosting student engagement with data science ethics and awareness.
- Replaced synchronous route optimization with async jobs and geocode/matrix caching for a nonprofit routing tool, cutting re-optimization time from minutes to seconds and eliminating timeouts.
- Persisted fleet data with CRUD endpoints, named presets, and a tuned solver (bounded time limits, guided local search), enabling fast, reliable route generation every planning day.

Web Development Intern — July 2026 – Sept 2026
Water Resources Economics — *Remote*
- Compiled a 347-city California water rate dataset, powering the firm's first public rate comparison tool.
- Engineered a self-service rate calculator (WordPress, JS, Chart.js, Papa Parse), giving any visitor instant, no-cost access to compare water rates statewide.

Full Stack Developer Intern — November 2025 – February 2026
Nest Friends — *Remote*
- Built 4 production React Native screens and implemented Mixpanel analytics across 15+ events, accelerating design-to-dev handoff and enabling data-driven product decisions.

Projects

Piggy.AI | *React, TypeScript, Node.js, Express, MongoDB, Google Gemini* — April 2026
- Implemented email/password and Google OAuth authentication via Passport.js with bcrypt hashing and JWT session management, enabling secure account access across both login flows.
- Built a Gemini 2.5 Flash PDF parsing pipeline that extracts transaction data (date, amount, category) from multiple bank statements simultaneously, achieving 85-90% accuracy in 30-60 seconds per file.
- Developed a personality-driven AI chat advisor powered by Gemini with three selectable tones, making personalized financial guidance more engaging by adapting to user preference.

Decidr | *React Native, Express, TypeScript, MongoDB, Node.js, Yelp Places API* — December 2025
- Designed a weighted recommendation algorithm combining Yelp ratings with review volume thresholds, filtering out low-confidence ratings to improve recommendation quality across 50,000+ San Diego restaurants.
- Developed a full-stack restaurant discovery app with React Native frontend and Express.js/MongoDB backend, implementing geolocation-based search within a configurable radius and real-time Yelp API integration.
- Built RESTful API with TypeScript following MVC architecture, featuring bcrypt password hashing, MongoDB schema validation, and protected route middleware for secure user session management.

Extracurriculars

Association for Computing Machinery @ UCSD | *Hack Projects Lead* — May 2026 - Present
- Mentor 1 Hack team per quarter, providing technical guidance across the MERN stack and coaching teams on Agile development practices throughout the project lifecycle.
- Placed **3rd overall** out of **134** teams and **400+** participants at DiamondHacks 2026, collaborating with a team of 4 to ship Piggy.AI in under 24 hours.

Triton Web Developers | *Web Developer* — April 2026 - Present
- Build and deploy production websites for student organizations lacking technical resources, collaborating with client clubs to gather requirements and deliver tailored web solutions.
